

3D Laser Scanning

Our 3D facility mapping service, powered by LiDAR SLAM (simultaneous location and mapping) technology, helps you make precise and well-informed decisions about your properties. Facility managers can accurately assess layouts and pinpoint asset locations, optimizing spaces for better efficiency.

These detailed floorplans simplify the retrofit process for hospitals, offices, or college campuses. In real estate, accurate floorplans ensure that property owners and buyers clearly understand the property's value.

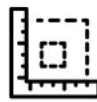

Industries We Serve:

Architecture

Facility Management

Space Planning

Real Estate

Engineering
